

# Jumbo NurseryStone™

simply beautiful simply installed®

"Landscape projects give you the best return on your home improvement."

## A Landscape Feature Wall...

can add a beautiful new dimension to your yard. With Jumbo NurseryStone, you get a natural-looking wall that stacks up to anything a professional landscaper can build.

## Jumbo NurseryStone Is Versatile

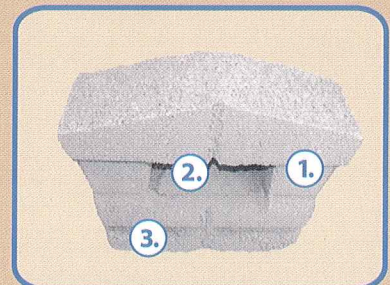

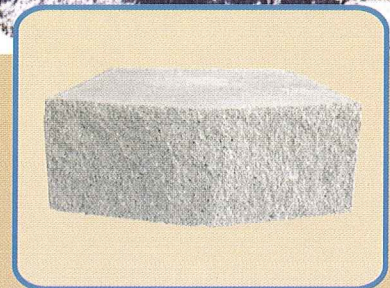

There are beveled blocks for easy assembly of straight or winding walls. Utilize the square sided block as a cap for the top of the wall to give it a finished look.

## Helpful Patented Features

1. Handholds make it easier to grip and lift blocks.
2. The cavity allows the block to be as lightweight as possible without compromising its strength and endurance.
3. The bottom heel enables the block to hook over the course below, securing the block and providing the proper set-back.

## Installation Is A Snap

See instructions on reverse side. A beautiful feature wall for your yard could be right around the corner.

# Jumbo NurseryStone™

For Walls Up to 4 Feet High

## Product Benefits

- Lightweight blocks mean faster, safer installation.
- Blocks are designed to stack easily to form solid, sturdy walls.
- Blocks fit together snugly (without gaps) to give the wall a professional appearance.
- Beveled sides allow walls to form graceful curves.
- Straight sides maintain a gap-free appearance along straight sections of wall.

## Easy Installation

1. Begin at the lowest elevation. Determine the line of wall. Dig a trench 6" deep and 12" wide. Fill trench half full with level compacted gravel. Check for level side to side, front to back.
2. Install base course of blocks, level side to side, front to back. Fill between and behind blocks with gravel. Sweep excess from top of blocks.
3. Position remaining blocks on top of first course, utilizing the cross bond pattern. Continue checking for level.
4. Fill between and behind blocks each course. Compact the gravel and check for level. Sweep excess gravel from blocks.
5. Finish wall and landscape.

## Guidelines & Information

- Soil conditions, land slope and water table affect final design.
- Walls require a minimum two inches of gravel base.
- 6" Jumbo NurseryStone is typically suitable for walls up to 4 feet tall. Consult local codes and site conditions to determine your specific limitations.
- Determine square footage of wall by multiplying height x length.  
Total blocks needed: sq. ft. x 1.5

## Tools & Materials

- Shovel, wheelbarrow, level, string line and wooden stakes. A 3/4" minus gravel is recommended.

## Standard Unit

- Weight - 70 pounds
- Size - 6" high x 16" wide x 12" deep
- Color - check with local manufacturer for color choices
