

# WORKING WITH...

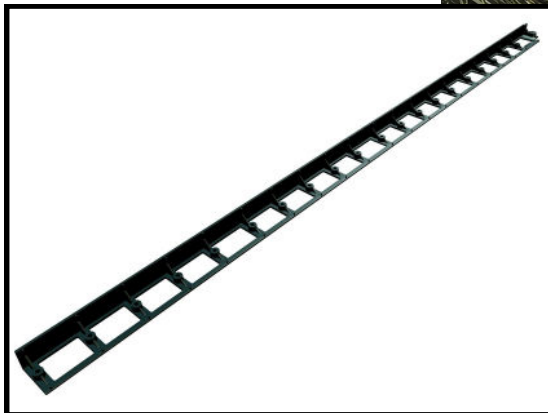

Cut as many "legs" on Snap Edge as needed to achieve the desired radius or bend. Note the proper mitered cut by making the cut on an angle.

Once Snap Edge is cut it will bend smoothly and evenly for perfect inside or outside radiuses. Also, it will bend only where you have cut. The rest of the edging will remain perfectly straight, holding tightly against your hardscape installation.

Snap Edge starts as a perfectly straight, 8' in length piece. Use it straight on all straight hardscape perimeters.

Each piece of Snap Edge has an interlocking joint at one side. Multiple pieces can be joined together by locking these joints and securing with a spike to the aggregate below.
