

# Cima Stone™

## Cima Stone™

Cima Stone™ is a versatile and aesthetically pleasing paver that mimics the appearance of natural flagstone, making it an excellent choice for those looking to create beautifully integrated hardscapes. Available in 11 different sizes, including five innovative half-hex stones, Cima Stone™ offers flexibility in design. These half-hex stones can be used together to form a complete hexagon or as edger stones, reducing the need for cutting and ensuring a seamless installation. The paver's surface features false joints that enhance its natural look, giving homeowners the ability to craft a hardscape that looks and feels like genuine stone.

The irregular shape and natural-looking joints of Cima Stone™ are designed to evoke the timeless appeal of weathered stone, adding both depth and character to outdoor spaces. Its random pattern effortlessly blends with the surrounding landscape, creating a harmonious flow that is both visually striking and subtly elegant. Whether used in a patio, walkway, or driveway, Cima Stone™ enhances the beauty of any outdoor area, offering a sophisticated yet organic aesthetic that elevates the overall look of your home.

## Composition and Manufacture

Cima Stone™ is made from a low moisture concrete mixture. It is made under high pressure and high frequency vibration, producing a very dense stone, low in water absorption (less than 5%) and high in compressive strength PSI (above 8000). It is designed to meet or exceed ASTM C-936 and ASTM C-67 (freeze/thaw) specifications.
